

All the features of the Pursuit combine to give a new level of stability.

It's features galore on the 6.2 Pursuit.

6.2 Pursuit plate alloy

DO you dream of a plate aluminium boat of solid alloy construction?

Or maybe a plate alloy boat that will stand up to a harsh marine environment?

Then your dreams can come true as you will receive all this and more with the release of the new 6.2m Pursuit.

Upon returning from your first outing in this Plate Xtreme model, you'll realise a new level of stability and steadfastness has arrived in the plate alloy boat arena.

This has been achieved by a combination of a deep vee hull, a 19.5-degree dead rise at transom, reverse chines and even weight distribution throughout.

All these features combine to create a hull that performs and rides like a much larger vessel.

As with all Sea Jay plate alloy models, every concept of their design is planned, drawn, built and tested at the factory.

Being designed in-house using the latest in 3D modeling not only allows the company to construct its Plate Xtreme range with precision, but also the flexibility to redesign instantly to a customer's request.

The bottoms, transom, longitudinal stringers and keel are all made from 5mm 5083 plate alloy and tied together to the solid 4mm cross bulkheads and fully-welded self-draining floor, creating structural strength far superior to any pressed boat on the market.

Under the floor is fitted with air chambers as well as buoyancy foam for extra flotation and safety.

Like its big brother (the 6.8 Pursuit), the 6.2 Pursuit comes complete with

many practical features such as a dive door to safely enter or exit via the transom, an overhead radio console which can smartly house your VHF radio and CD/MP3 player and alloy rocket launcher that comes standard with eight rod holders for conveniently stowing away your rods.

Other inclusions are a solid alloy hardtop to keep you high and dry in adverse weather conditions, fully-plumbed bait tank, alloy bait board with four rod holders, hydraulic steering to stop your arms from having a workout before you have even started fishing and heavy-duty boarding ladder.

Cabin bunk cushions for much-needed comfort (especially on extended trips) are a sensible and functional feature, along with carpeted alloy floors

including a fully-lined cabin area for that extra touch of class (something that is left out of most plate boats) and fully upholstered offshore bucket seats mounted on seat frames, allowing extra storage.

The seat frames have been designed to create a cavity to slide your Esky partially under to allow for more deck space.

As part of the options range, Sea Jay can supply a 110 litre Esky with a split lid that fits the seat frame cavity perfectly and allows the lid to open without the need to slide the Esky out every time.

The Esky can also be optioned up with an upholstered lid, allowing even more seating positions.

This also creates more cockpit room to fish from.

Storage can sometimes be an issue when loading

up your boat for a big fishing trip.

To combat this, the Pursuit comes with two gunwale shelves, two side pockets, helm and passenger pockets and a generous amount of space under the cabin bunks.

A chemical toilet can be housed out of sight in one of the bunk cavities.

While the 6.2 Pursuit comes with many standard features, additional options are still offered to further enhance this model.

These include a freshwater deck wash that comes connected to a 75 litre water tank (or you can still have a saltwater deck wash if so desired), 100 litre icebox with a split lid that can conveniently fit inside the seat frame and an upholstered cushion for the icebox to create another seat position without losing vital deck space.

Other options are an electric anchor winch for easy anchor retrieval, coloured sides to make your pride and joy stand out from the crowd, trim tabs and deluxe seat boxes fitted with either an extra passenger seat or a fully-plumbed sink.

For the serious offshore fisher, the transom can be converted to take twin engines.

Fitted to this model is a dual roller heavy-duty bowsprit – a must for effortless anchor retrieval.

A spacious anchor well can be found behind the bowsprit that can easily house the anchor and anchor rope with a large bollard for a tie-off point.

A mounting plate has also been fitted inside the anchor well that suits an electric anchor winch if so desired

Fuel capacity plays a

major part in planning your trips, as running out of fuel in the middle of nowhere can be outright dangerous.

A large fuel tank of 300 litres is standard with this model, giving you a massive range of travel for this size boat.

For added safety, the fuel tank is housed in a separate fuel cell (tank within its own cavity) to eliminate any fuel (or fumes) escaping into the bilge in the unlikely event of fuel spillage.

Further information on the 6.2 Pursuit can be found on the Sea Jay website at www.seajayboats.com.au where you will find the most up-to-date specifications, features and an array of photos. ↵
